技术规格

Background:	The protein encoded by this gene phosphorylates the inhibitor in the inhibitor/NF-kappa-B complex, causing dissociation of the inhibitor and activation of NF-kappa-B. The encoded protein itself is found in a complex of proteins. Several transcript variants, some protein-coding and some not, have been found for this gene.
Applications:	WB
Name of antibody:	IKBKB(Phospho-Tyr188)
Immunogen:	Peptide sequence around phosphorylation site of tyrosine 188 (L-Q-Y(p)-L-A) derived from Human IKK- beta.
Full name:	inhibitor of kappa light polypeptide gene enhancer in B-cells, kinase beta

Synonyms :	IKK2; IKKB; IMD15; NFKBIKB; IKK-beta
SwissProt:	O14920
WB Predicted band size:	87 kDa
WB Positive control:	COS7 cells lysates
WB Recommended dilution:	500-1000
