技术规格

Background:	This gene encodes a protein that plays an important role in the organization of the actin cytoskeleton. The encoded protein binds to a region of Wiskott-Aldrich syndrome protein that is frequently mutated in Wiskott-Aldrich syndrome, an X-linked recessive disorder. Impairment of the interaction between these two proteins may contribute to the disease. Two transcript variants encoding the same protein have been identified for this gene.
Applications:	WB
Name of antibody:	WIPF1
Immunogen:	Synthesized peptide derived from C-terminal of human WIPF1.
Full name:	WAS/WASL interacting protein family, member 1
Synonyms :	WIP; PRPL-2; WASPIP

SwissProt:	O43516
WB Predicted band size:	51 kDa
WB Positive control:	K562 cells lysate
WB Recommended dilution:	500-3000
