Full name:	ribosomal protein S6 kinase, 90kDa, polypeptide 2
Immunogen:	Synthetic peptide of human RPS6KA2
Name of antibody:	RPS6KA2
Applications:	ELISA, IHC
Background:	This gene encodes a member of the RSK (ribosomal S6 kinase) family of serine/threonine kinases. This ki

nase contains 2 non-identical kinase catalytic domains and phosphorylates various substrates, including members of the mitogen-activated kinase (MAPK) signaling pathway. The activity of this protein has been implicated in controlling cell growth and differentiation. Alternate transcriptional splice variants, encoding different isoforms, have been characterized.
