### 技术规格

<b>Background:</b>	The protein encoded by this gene is a member of the serpin family of proteinase inhibitors. Members of this family maintain homeostasis by neutralizing overexpressed proteinase activity through their function as suicide substrates. This protein inhibits the neutrophil-derived proteinases neutrophil elastase, cathepsin G, and proteinase-3 and thus protects tissues from damage at inflammatory sites. Alternative splicing results in multiple transcript variants.
<b>Applications:</b>	ELISA, IHC
<b>Name of antibody:</b>	SERPINB1
<b>Immunogen:</b>	Fusion protein of human SERPINB1
<b>Full name:</b>	serpin peptidase inhibitor, clade B (ovalbumin), member 1
